I was looking for a small camera to take along with me when I did not want to lug around a DSLR camera and lenses. After much research, I settled on the PowerShot G9 X Mark II and so far, I am very pleased with the results.

The premium compact cameras give the user the option to manually control settings shutter speed, aperture, ISO, while also offering the traditional "Auto" point and shoot mode, as well as other creative settings typically found on a point and shoot. These cameras also feature a 1" CMOS sensor, which produces better images than a typical cell phone camera. Updates to the Mark II version include the Digic VII image processor, which means faster processing and continuous shooting times for JPEG and RAW photos a maximum continuous shooting speed of 8.2 fps in RAW shooting mode. The Mark II also features dual sensing image stabilization, a quicker autofocus feature and improved subject tracking, auto shooting mode, and a slight improvement in battery life. The Mark II also is Bluetooth compatible, a new feature the camera also has WiFi and NFC capabilities. Transferring photos from the camera to your phone is easy with the Canon Camera Connect app. I have used the camera for a few weeks and I like it. The camera is small it can literally fit in my front pocket and the large 3" touchscreen is relatively intuitive the camera has a limited amount of buttons. The user can control mostly everything via the touchscreen, and I have found that visibility of the screen is still very good for daylight shooting. The lens range itself is limited, but what you lose in zoom you make up for in quality photos and compactness. The focal length in the lens of the Canon G9X II is 28mm-84mm, with a 3X optical zoom and a 12x digital zoom, which will produce grainy photos. The zoom on this camera will not give you close ups of the moon. The lens barrel also has a ring, which can be used to control a variety of settings. There is no viewfinder. Overall, I am very pleased with this camera. The only negative at this point has been battery life, but the battery life I have experienced may have been comprised since I have been setting up the camera and using its various features.

Still, it probably makes sense to buy and carry a spare battery if you are going to be out all day shooting. Highly recommended! Honestly if you want the highest image quality in the smallest profile

possible, this camera is it. Is it worth upgrading from the original though. I guess it depends on what's important to you. If you feel that you would use the in camera raw processing and more in depth adjustments for picture styles then it's worth considering. While its JPEGs are slightly sharper due to the newer processor, overall image quality is about the same. The photos look great with excellent color reproduction and the auto white balance has improved a bit over its predecessor. Video quality is also very good. The overall layout of the camera is essentially the same as its predecessor. You only get one control dial and have to rely on the touch screen for the rest of setting adjustments. But as with other cameras, the touch screen works great so this might not be as big of a deal as it seems. Ergonomics are pretty good for such a small camera. With a nice textured surface up front for a more secure grip. Autofocus performance has improved over the original G9X, mainly in the form of being less sluggish and more accurate in low light conditions. Movie AF has improved a bit too with less back and forth motion while focusing over the original. Battery life has also improved like it did on the G7X Mark II. Although if you're taking this out for a long day of shooting, you still might pack an extra one. Enthusiast compacts in general don't have the greatest battery life. Overall, this is a likeable little camera that does photos and videos very well and is slim enough to fit in most pockets. Some may find the lens too restrictive as far as focal length is concerned but that's one of the tradeoffs you have to make when you stuff a larger sensor in a small camera body. If you have the original G9X, this is not the no-brainer upgrade.

But if you're a new buyer to this series, it's worthwhile to spend the extra money to get the Mark II for the extra features and slight bump in overall performance it provides. The competition includes the Canon Gx7 and various Sony, Nikon and Lumix models. This camera by spec is a lesser model to these competitors all have 1 inch sensors which I wanted for superior low light shots, but they also cost 150 to 400 dollars more. If you are an amateur enthusiast like me and probably do not need great manual flexibility although this model has some flexibility, and want a very good P and S to use instead of your cell phone, I would highly recommend this model. No camera is perfect. It's just the matter of where you are willing to make compromise. In terms of light traveling camera, this is as good as you can get. The camera is truly pocketable, decent focal range, great image quality. Wifi is a big bonus since I travel without a laptop and can transfer photos over to my iPhone to edit and post on social media during the trip. I have used Sony RX100 v1v3, Canon S90S120, and G9 X mark1 in my traveling and so far this G9 X Mk2 is my favorite. The screen has now failed entirely, so one cannot see, or review one's pictures. The rest of it still works. Below is my original review a year ago. This camera is a definite step up from the basic models. Quite a choice of usage options. The big letdown is the lack of a good zoom. Just a couple more magnifications would have made all the difference, but sadly this is lacking. The zoom is the same as the cheapest model it seems. Maybe the manufacturer felt that the higher priced models would entice the public, with their better zoom characteristics. Canon can do this with a better lens and double the zoom. Sorry, we failed to record your vote. Please try again I wanted something that could fit in my purse and that would save my phone battery life.

Pros way more beautiful pictures than with a cellphone of course compact and easy to carry around nice design good battery life I could wait until the evening to charge it during my vacations, no need to charge it during the day amazing low light performance with a tripod cons can be a little bit tricky to understand how to use the features for a novice like me I spent several hours on youtube and tutorials connecting it to your phone is not really user friendly no viewfinder it may be an issue for some people Sorry, we failed to record your vote. Please try again Photos taken in lowlight with no flash turn out flawless. Stabilization is second to none. all in all the perfect camera for high quality photos and HD videos without the bulk. Honestly do not have a bad thing to say about this camera. You won't regret spending the money on it. Well worth every penny! Sorry, we failed to record your vote. Please try again I bought because I have had canon cameras in the past. I plan to use this for a backpacking vacation, may update later with photos! Sorry, we failed to record your vote. Please try

again Roots D1 case goes well with it. Sorry, we failed to record your vote. Please try again It does time lapse and slow motion video. It has great quality video 1080 at 60fps. Its small, easy to carry and travel with. Its metal build quality. Overall its a great camera, easy to use and good pics at night. Sorry, we failed to record your vote. Please try again A bit more customer friendly instructions would be welcome. Not all photographers have built computers or grown up with 5G networks, etc.; Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again But nonetheless its still a great camera. Sorry, we failed to record your vote. Please try again I gave it to my son for a trip to India and his pictures are all looking great! at least on facebook.

He researched it quite a bit and requested this camera for his birthday as he said its the best for a small camera. Sorry, we failed to record your vote. Please try again Discreta, nao chama a atencao como o celular ou maquinas maiores. Cabe numa bolsa feminina ou bolso de casacos. De facil manuseio. Tem opcao para ajuste manual e substitui satisfatoriamente uma DSLR. Sorry, we failed to record your vote. Please try again This is better than my DSLR for night timeshoot. Also, no issues with day time shooting either. Sorry, we failed to record your vote. Please try again Easy to use. Really like the fact that its a small camera and easily fits in my purse. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again The touch screen is impressive. Sorry, we failed to record your vote. Please try again In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Canon PowerShot G9 X Mark II equipped with a 20.2MP 1.0type BSI CMOS sensor and DIGIC 7 Image Processor delivers clean, highresolution images and outstanding lowlight performance up to ISO 12800. The highquality 3x 2884mm optical zoom lens is great for portraits and landscapes. The Sensing Image Stabilization offers 3.5stop correction to ensure crisp, steady stills and videos even handheld or in difficult lighting conditions. Leave a Comment Cancel reply Save my name, email, and website in this browser for the next time I comment. In fact I've witnessed a demo G7X at the same showroom where the touch operation has completely failed even with the function set to "on", only to be operative as usual thanks to the RHS rear control set. Showroom staff has been informed of the matter; Live histo display during EV shift is only possible by adjusting via the frontal lens ring.
